

DAY 1

Technical Internships

R&D, Engineering, Manufacturing, IT, QA

We are offering internship (mandatory or non-mandatory) or thesis projects with real impact on products that consumers around the world can't live without. You will invent, reapply and develop technologies required to support the production process of our world-class consumer products and for managing the company's billion-dollar capital investments.

During your internship you get to work on your own technical project and apply your skills and strengthen your capabilities. You will work with people of different nationalities and cultural backgrounds. We make sure that you gain support and mentoring in your professional development and will provide you with various training opportunities.

Our internships usually have a duration of 3-12 months and are open to all enrolled students who have completed their first two Bachelor semesters.
